(54) TRANSMITTER POWER CONTROL SYSTEM FOR MOBILE COMMUNICATION SYSTEM

(57)Abstract:

PURPOSE: To keep the signal quality of the cellular type mobile communication system constant.

CONSTITUTION: The mean reception bit error rate of a channel in use is measured on a reception side. When the mean reception bit error rate is less than a 1st threshold value, the transmitter power of a transmission side is decreased by a certain quantity. When the mean reception bit error rate is larger than a 2nd threshold value, the transmitter power of the transmission side is increased by a certain quantity. Instead of the reception bit error rate, CIR (communication wave-to-interference wave power ratio) is measured on the reception side and the transmitter power of the transmission side may be controlled according to the measured value.

LEGAL STATUS

[Date of request for examination] **25.12.1996**

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] **2823034**

[Date of registration] **04.09.1998**

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
